Expectations

Lasting Beauty and Performance

Their time-tested strength makes Diamond Pro® retaining wall systems the contractors' choice for large-scale projects.

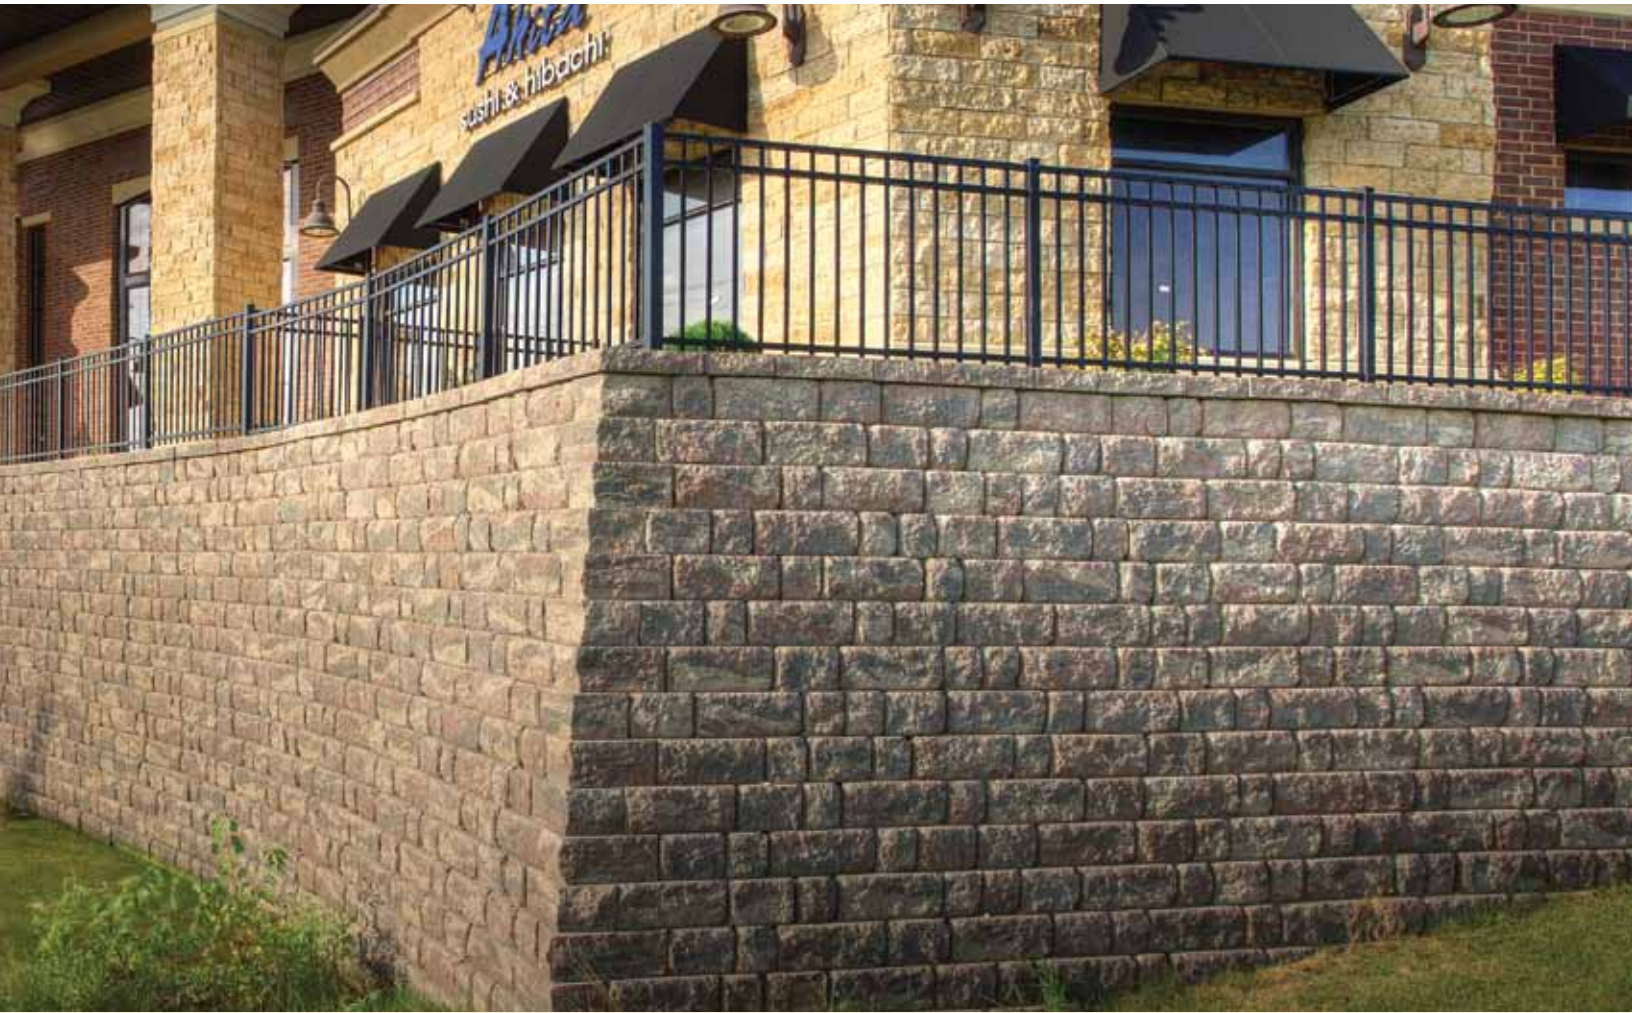

Diamond Pro® retaining wall system

This standard-split wall system is available with a straight-split face for a clean, crisp appearance or with the angled plane of the beveled face for a traditional look.

Diamond Pro Stone Cut® Virtual Joint retaining wall system

With its rough-hewn face, this virtual joint product provides an appealing multipiece look with the installation speed of a single-piece system.

A leading segmental wall manufacturer, Anchor Block Company meets MnDOT's strict standards for durability (5800 psi strength) and freeze/thaw resistance (90 freeze/thaw cycles in three percent saline solution).

Independent testing is frequently done concurrent to our own testing to ensure integrity and to meet or exceed the quality you expect.

These products are listed on ICC-ES evaluation report No. 1959 at www.ICC-ES.org.
