RINN™ PAVING SYSTEMS

ICONIC EUROPEAN STYLING, RICH LONG-LASTING COLOR

A CENTURY OF INNOVATION

For the first time, Rinn™ concrete paving elements (pavers and flags) are available in North America. Rinn Beton- und Naturstein GmbH & Co. is recognized as the preeminent German manufacturer of concrete pavers and flags, and, thus, as one of the leading producers of these products anywhere in the world. The hallmarks of Rinn's pavers and flags are incredible durability, exquisite detailing, beautiful finishes, eye-catching colors and color-patterning, and a uniquely German, and timeless, style. Anchor is widely recognized as the world leader in innovative concrete retaining wall elements. Rinn makes and sells Anchor™ retaining wall elements in Germany. Over the past three years, Rinn has worked closely with Anchor to transfer the Rinn paving element manufacturing know-how to Anchor, so that Anchor can now manufacture authentic Rinn paving elements at its plant in Shakopee, Minnesota. Anchor is the exclusive North American manufacturer of Rinn paving elements.

A BRIEF HISTORY OF PAVING SYSTEMS ▼

2600-2200 B.C.

Egyptians made a 7½-mile road of sandstone, limestone and logs to transport stones for the pyramids.

300-200 B.C.

Romans - wanting good roads for military, economic, and administrative reasons - built on what they had learned from the Greeks (lime-cement & masonry), Etruscans (cement), and Carthaginians (pavement).

1800s

McAdam & Telford macadam technique (unbound broken stone with fine stone and sand settling between) was popular. Logs (corduroy) and wood slats were also used.

Through our partnership with Rinn, Anchor Block Company is pleased to introduce the Rinn™ Laziano® and Medino® paving systems. These richly colored concrete paving systems are the clear choice for a variety of applications, including residential driveways, patios and walkways. The signature Rinn manufacturing process sets a new benchmark for product quality that surpasses world standards for strength and durability. These leading-edge paving systems bring an iconic European style to any outdoor environment.

1900s

Rinn Beton- und Naturstein GmbH & Co. KG was founded near Frankfurt, Germany. Anchor Block Company was founded in Twin Cities, Minnesota.

1930-1960

Rectangular concrete units were successfully tested under heavy traffic in Germany. Dimensionally consistent, hand-size concrete pavers were introduced in Germany and used to replace clay brick streets damaged during WWII.

TODAY

Anchor and Rinn announce an unprecedented North American licensing agreement. Anchor introduces two Rinn™ paving systems to the U.S. market.

MEDINO® PAVING SYSTEM ▼

STRENGTH MEETS BEAUTY

The accepted standard in Germany and other world-leading centers of segmental paving design and usage, face-plus-base is the most durable type of concrete paver construction, providing the ultimate combination of aesthetics and strength. Through a precisely timed sequence of compression and vibration, the specially formulated face and base mixes become a composite whole during the manufacturing process. With their rich colors and carefully selected aggregates, Rinn™ paving systems will withstand the harsh Midwest climate and continue looking beautiful for years to come.
